

ROBERTS GORDON® INFRARED HEATING

ROBERTS GORDON® Infrared Heaters Improve Productivity for Manufacturers

A common complaint among manufacturing workers is the temperature in their workspace. Studies have shown that keeping employees comfortable improves focus, performance and productivity. Pre-cast and concrete structures with wide open spaces and high ceilings, manufacturing facilities can be difficult and expensive to heat when the wrong heating system is chosen.

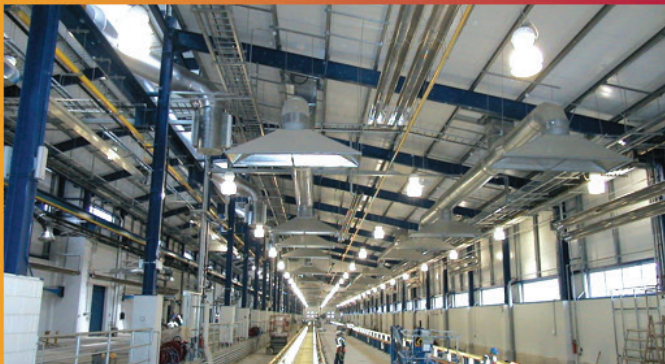

Traditional heating options, like warm air unit heaters, waste a significant amount of energy every time overhead doors are opened, take a long time to recover the heat and warm up the large cold masses created by heavy machinery and equipment.

For decades, ROBERTS GORDON® infrared heaters have been efficiently heating manufacturing facilities, while reducing operating costs.

Benefits for Manufacturing

- Quick heat recovery – floors stay warm even after doors are open for extended periods; equipment and machinery re-radiate heat in the space
- Even heating – greater comfort for workers
- Flexible design – target heat where needed, accommodate trusses and other structural obstacles with minimal roof penetrations
- Reduced energy costs – achieve optimal comfort using up to 50% less fuel
- Dryer, warmer climate – reduced condensation not only means longer heater life, but no damage to equipment or machinery
- Clean, quiet, draft-free – eliminates blowing air on workers and manufactured product
- Broad product range – choose CORAYVAC® burners-in-series for even heating or COMPLETE™ HED harsh environment heaters for wash bays or COMPLETE™ TF twin fire heaters for loading docks
- Minimal maintenance – change filters every several years and enjoy trouble-free operation
- Experienced, knowledgeable team – representative and factory support guide you from design through to commissioning and start up
- Increased profits – Material, labor and operating cost savings from all of the above
